- React, Redux, Tailwind CSS
- Node.js, Express
- MongoDB, SQL
- Python
- Java
- Git, GitHub
- Agile Management
- Scrum Framework

### PROJECTS

#### Beauty Service Booking Website (HTML, CSS, JavaScript and SQL)

- The website features a stunning display of makeup and hairstyling works, allowing clients to explore the artist's creativity and expertise.
- Users can easily select services and secure their preferred time slots through a user-friendly booking system, enhancing the overall client experience.
- The platform utilizes SQL for efficient data management, enabling secure storage and retrieval of client information, bookings, and service details.
- Built with HTML, CSS, JavaScript, and SQL, the site ensures optimal functionality and accessibility across all devices, providing a seamless experience for clients seeking beauty services.

#### MERN Stack Tours & Travels Booking Website (ReactJs, Node Js, MongoDB )

- Built with React.js, the frontend offers a responsive and interactive experience, allowing users to easily browse and explore various travel packages and destinations.
- The backend, powered by Node.js and Express, manages user authentication and booking functionalities, ensuring secure transactions for clients.
- MongoDB serves as the database, providing robust storage solutions for user data, booking details, and travel package information, facilitating smooth data retrieval and management.
- The website integrates all essential features, making it a convenient and engaging platform for travelers to plan and book their next adventures.
